Incentive Program for Sewer Lateral Improvements

The Incentive Program for Sewer Lateral Improvements is intended to lessen the burden of the total cost of repairs for property owners, and to incentivize property owners to be proactive about repairing their lateral *before* spills occur. The Incentive Program is available to both residential and commercial properties and will continue for as long as funds are available.

The Incentive Program consists of a rebate program (described below) and the waiving of permit fees for sewer lateral repairs (a \$339 value as of June 2018).

Rebate Amounts

The rebate amounts for each type of repair will typically cover approximately 10% of the total cost of the repair. The diagram below shows the types of repairs which qualify for rebate, and the dollar amount of the rebate per repair type. The maximum possible rebate amount for a given property is \$1400 (cleanout, full lateral, and connection to main).

Rebate Process

The property owner must fill out and submit a rebate application (available at our front desk and online) and include the property information, contractor information, and information regarding the scope of repairs. The scope of work (and therefore the rebate amount they qualify for) will be verified through inspection by Public Works. Once the work is verified as complete, a check for the specified rebate amount will be issued to the property owner.

The application for the Sewer Ordinance Lateral Incentive Program Rebate is available at the Public Works front counter and is available online.
